

One of the best ways to maintain sanitary temperature control products and avoid dirt build-up is to clean the exterior surfaces regularly.

When cleaning it is important to observe the following:

- Brush off loose dirt.
- Always use a mild concentration of a pH neutral detergent.
- Water should be from a cold to lukewarm temperature.
- Use a soft bristle brush or cloth to clean.
- Spot cleaning around bumper hardware
- Air dry.

It is recommended to perform a test in an inconspicuous area for evaluation prior to cleaning the entire surface of the product. This will ensure it does not have any adverse affect regarding the aesthetics or functionality of the product.

Avoid using:

- Detergents that contain halogens such as bromine, chlorine, iodine, strong alkaline or acids.
- Do not use cleaners containing citrus oil

For additional questions on the care and cleaning of these products, please contact your Safe Fleet Truck & Trailer Territory Manager at 800-323-7424.
